VERS-O-WELD 45 Automatic Welding Surfacing System

This is the largest version of our Vers-O-Weld family. This particular unit is shown with a powered vertical torch axis. This machine can be used in longer lengths than the series 25 because it utilizes a large travel beam and open face carriage that will clear backside support posts. We have built units with 50ft travels so it shouldn't be considered portable. We also build a closed carriage version for travels up to 14 feet that can be supported on the ends without risk of beam sag.

This VOW45 was built with a set of fixtures and a chuck drive system for turn rolls and welding using a manual sub arc process. The open carriages were used to keep the system back for the work zone to minimize heat induced in the drive motors.
